

An International Comparison of Deregulation in the Construction Industry

The construction industry is a major economic driver in many countries around the world. However, the industry has been plagued by a number of problems in recent years, including high costs, low productivity, and a lack of innovation. One of the main reasons for these problems is the heavy regulation of the industry.

In recent years, there has been a growing movement towards deregulation in the construction industry. This movement has been driven by the belief that deregulation will lead to lower costs, higher productivity, and more innovation. However, there is little empirical evidence to support this belief.

This book provides an in-depth analysis of deregulation in the construction industry across various countries. It explores the impact of deregulation on industry structure, market competition, and innovation. The book finds that deregulation has had a mixed impact on the construction industry. In some countries, deregulation has led to lower costs, higher productivity, and more innovation. However, in other countries, deregulation has led to increased costs, lower productivity, and less innovation.

This book is a valuable resource for policymakers, industry leaders, and researchers who are interested in the impact of deregulation on the construction industry. The book provides a comprehensive overview of the current state of deregulation in the construction industry and identifies the key factors that have contributed to its success or failure in different countries.

Key Features

- Provides an in-depth analysis of deregulation in the construction industry across various countries
- Explores the impact of deregulation on industry structure, market competition, and innovation
- Identifies the key factors that have contributed to the success or failure of deregulation in different countries
