Summary

In 1991, eight scientists and engineers embarked on an extraordinary mission: to live inside a sealed, 3.15-acre Biosphere in Oracle, Arizona, for two years and twenty minutes. Their goal was to study the complex interactions between humans and the environment, and to test the viability of sustainable living in a closed system.

The experiment, known as Biosphere 2, was a groundbreaking undertaking that captivated the world's attention. The Biospherians, as they came to be known, faced immense challenges in maintaining a habitable environment within the closed system. They struggled with air quality, food production, and waste management, while also navigating the interpersonal dynamics of living in close quarters for an extended period.

Despite the difficulties, the Biosphere 2 experiment yielded valuable insights into the principles of sustainability. The Biospherians learned the importance of biodiversity, nutrient cycling, and energy conservation. They also gained a deep appreciation for the interconnectedness of all living things and the fragility of the Earth's ecosystems.

The Book

Two Years and Twenty Minutes Inside Biosphere is a firsthand account of this extraordinary experiment. Written by Mark Nelson, one of the original Biospherians, the book offers a gripping and thought-provoking exploration of what it means to live sustainably on Earth.

Nelson vividly recounts the challenges and triumphs of life inside Biosphere 2. He describes the highs and lows of living in a closed system, from the exhilaration of scientific discovery to the frustrations of system malfunctions. He also shares his personal reflections on the experience, and the profound lessons he learned about humanity's relationship with the natural world.

Two Years and Twenty Minutes Inside Biosphere is more than just a scientific memoir. It is a compelling story of human ingenuity, resilience, and the pursuit of a more sustainable future. Nelson's insights are as relevant today as they were three decades ago, and his book offers a timely reminder of the importance of protecting and preserving our planet.
